**Tuesday 13 April, 2010, 1300-1400**

45a & b AZ 04  
University of Surrey

**Julian Sutherland**  
Design Director - Sustainable Development, ATKINS

### **The Look and Feel of Sustainable Urban Design**

We live in a world where sustainable design is no longer optional. Our clients expect it; the codes demand it and the future of mankind requires it. We must therefore understand what sustainable design is and how best to deliver it. This presentation will discuss the key drivers for sustainable urban design, illustrated with real projects and case studies.

Julian has recently joined Atkins specialising in the sustainable multi-disciplinary design of buildings, neighbourhoods, cities and resource masterplanning. His experience covers a broad range of projects both in the UK and abroad. During his time at Atkins, Arup and Building Design Partnership he has worked on many iconic projects around the world.

These projects are always founded on a thorough understanding of the local climate, landscape and culture.

Julian is an advocate for sustainable design and has considerable experience with passive and natural design techniques, producing low energy buildings, neighbourhoods and cost effective services solutions. This is complemented by excellent presentation and concept design skills with a strong focus on brief development, definition and evolution.
